

SIMULAÇÃO DA EXPERIENCIA CANON COM O
CÓDIGO RELAP4/MOD5

RONALDO CELEM BORGES

Comissão Nacional de Energia Nuclear
Departamento de Tecnologia de Reatores
Divisão de Análise de Segurança

RESUMO

Visto a importância do conhecimento dos fenômenos termohidráulicos envolvidos num Acidente de Perda de Refrigerante Primário - APRP em reatores nucleares refrigerados à água leve pressurizada, a Experiência CANON basicamente estuda a fase de despressurização deste acidente.

O objetivo deste trabalho é apresentar o resultado obtido pelo Código RELAP4/MOD5 quando da simulação da Experiência CANON para, posteriormente, ser comparado com o resultado experimental através do Tema Especial do 7º Encontro Nacional de Física de Reatores e Termohidráulica - VII ENFIR.

1. Objetivo

O presente trabalho visa mostrar o resultado do Código RELAP4/MOD5 [1] na simulação da Experiência CANON a fim de integrar o Tema Especial do VII ENFIR [2], onde será efetuada a comparação teórico-experimental entre as diversas simulações realizadas por diferentes autores.

2. Condições da simulação

2.1. Experiência CANON

Conforme apresentado na referência [2], a figura 1 mostra o esquema de montagem da Experiência CANON possuindo as seguintes condições iniciais para a simulação:

- Caso A :
 - . pressão = 32 bar
 - . temperatura = 230 °C
 - . diâmetro da ruptura = 100 mm
- Caso B :
 - . pressão = 32 bar
 - . temperatura = 230 °C
 - . diâmetro da ruptura = 50 mm
- Caso C :
 - . pressão = 150 bar
 - . temperatura = 320 °C
 - . diâmetro da ruptura = 100 mm

2.2. Modelagem adotada e modelos considerados para o Código RELAP4/MOD5

Visto que o Código RELAP4/MOD5 está estruturado de acordo com o conceito de volumes de controle onde as condições do fluido em seu interior são as mesmas, adotou-se uma modelagem que

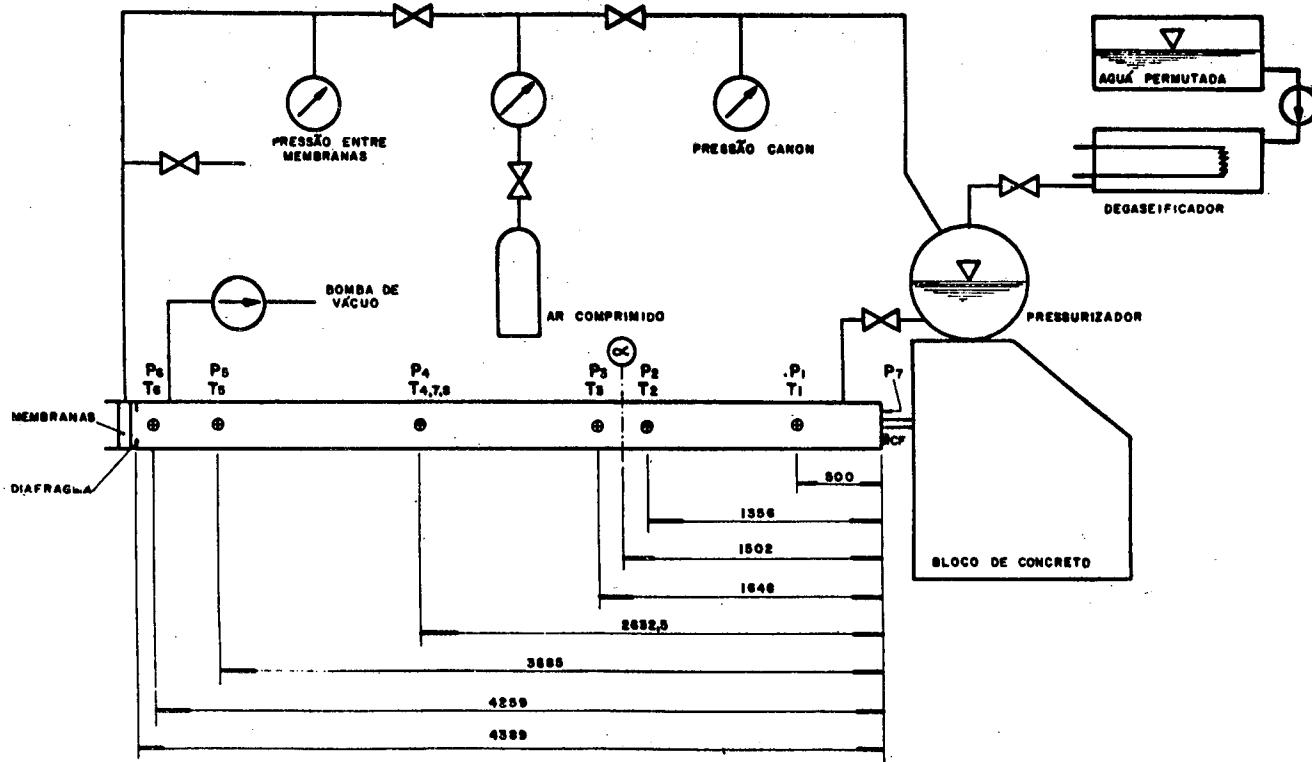

Fig:1- Esquema da Experiência CANON com Pontos de Medidas.

localiza os pontos de medida da Experiência bem no centro desses volumes de controle. Assim, o esquema de modelagem considerado para a simulação está mostrado na figura 2.

A tabela 1 apresenta as opções e modelos de cálculo do Código considerados nesta simulação e o Anexo A contém as listagens dos dados de entrada para cada um dos Casos.

Tabela 1 - Opções e modelos de cálculo do Código RELAP4/MOD5
considerados nesta simulação

JTPMV	- índice de fricção bifásica (=0 multiplicador de fricção bifásica com fricção de Fanning)
FJUNF	- coeficiente de perda de pressão por forma na junção de ruptura (=1,02)
JVERTL	- índice de junção vertical (=1 área de escoamento da junção é assumida ser circular centrada e distribuída verticalmente ao redor da cota de sua junção)
JCHOKE	- índice de "chocking" na junção
ICHOKE	- índice de "chocking" na junção (ICHOKE=0 e JCHOKE=5 modelo de escoamento crítico de Henry-Fauske e de Equilíbrio Homogêneo)
CONCO	- coeficiente de contração para descarga (=0,6)
ISTAGP	- (=1 usa as propriedades de estagnação)

3. Resultados obtidos

Após uma análise paramétrica efetuada em algumas das opções e modelos de cálculo do Código, conforme mostrado à título

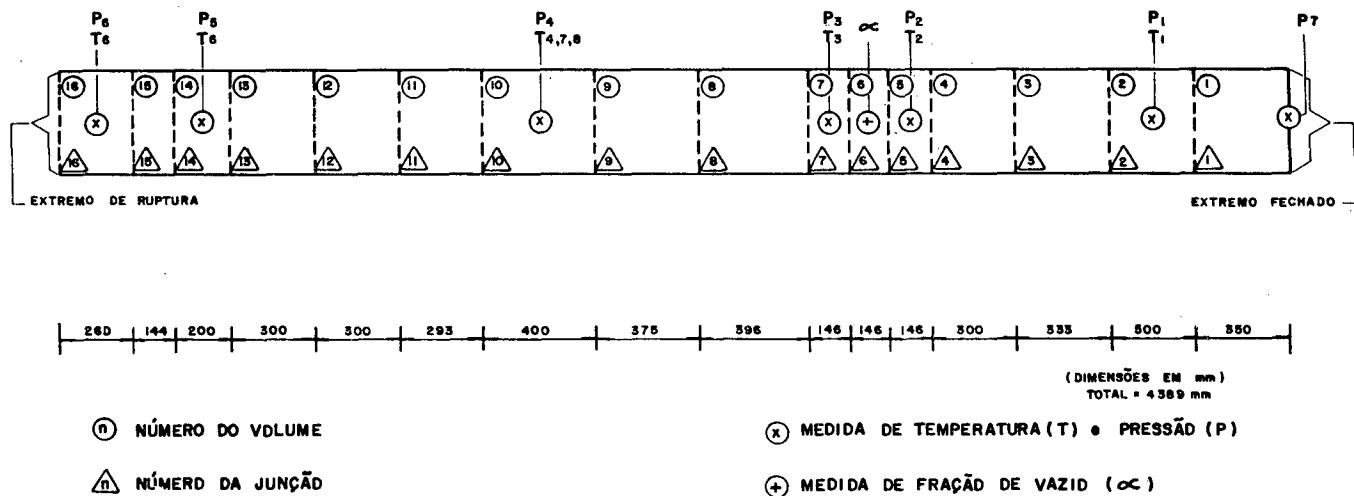

FIG. 2 - CÓDIGO RELAP4/MOD5. ESQUEMA DE MODELAGEM PARA A EXPERIÊNCIA CANDU.

ilustrativo no Anexo B, os resultados obtidos e julgados mais representativos para as simulações dos Casos A, B e C estão mostrados, respectivamente, nas figuras 3 à 9, 10 à 16 e 17 à 23, apresentando os perfis temporais de pressão, temperatura, fração de vazio e vazão mágica nos respectivos pontos de medida. No Anexo C encontra-se a listagem dos resultados obtidos na forma de tabelas.

Devido ao não conhecimento dos resultados experimentais torna-se difícil julgar o comportamento qualitativo e, principalmente, quantitativo dos resultados obtidos. Entretanto, fazendo-se uma comparação qualitativa entre os Casos considerados, verifica-se que o tempo de despressurização para o Caso B é mais lento que para o Caso A face ao menor diâmetro da ruptura, enquanto que para o Caso C a despressurização é bem mais rápida que nos outros Casos devido ao maior gradiente de pressão relativamente às condições do ambiente externo. Para os 3 Casos este comportamento está dentro do previsto.

4. Conclusões

Este trabalho apresentou os resultados obtidos pelo Código RELAP4/MOD5 quando da simulação da Experiência CANON, sem contudo efetuar a comparação teórico-experimental, a ser posteriormente realizada pelo Coordenador do Tema Especial do VII ENFIR.

Novamente, enfatiza-se aqui que face ao não conhecimento prévio dos resultados experimentais torna-se extremamente difícil avaliar os resultados obtidos pelo Código do ponto de vista qualitativo, quantitativo e fenomenológico, assim

como caracterizar o melhor ou pior desempenho de determinada opção ou modelo de cálculo interno ao Código.

Conforme apresentado no Anexo B, é possível verificar, à guisa de informação, a pronunciada, e em alguns casos a nenhuma, influência que a escolha de um determinado parâmetro do Código exerce sobre os resultados, o que enfatiza o comentário anterior.

Do ponto de vista do autor, a realização do exercício de simulação de determinado problema padrão, como este proposto, é de extrema valia pois permitirá, certamente, um amplo debate entre diversos autores que usem nas simulações códigos iguais ou diferentes, e principalmente, como descrito na referência [2],

- contribuir para o entendimento fenomenológico do problema;
- avaliar os erros obtidos;
- avaliar o desempenho dos modelos e/ou correlações do código para o tipo específico de problema;
- avaliar resultados de diferentes códigos e também de diferentes autores;
- permitir obter informações para quantificar margens de segurança que possam subsidiar projetos e critérios de licenciamento de centrais nucleares;
- aumentar a competência e a compreensão dos usuários dos códigos.

Dessa forma, o autor apoia a realização de novos exercícios com outros problemas padrões e de reavaliação no problema proposto após conhecimento dos resultados experimentais, além de desejar completo êxito no presente Tema Especial do VII ENFIR.

Anexo B

Análise paramétrica de opções e modelos de cálculo do
Código RELAP4/MOD5 para a Experiência CANON

A título informativo, foi efetuada a análise paramétrica de alguns parâmetros, conforme descrito na tabela B.1 e mostrado nas figuras B1 à B6.

Tabela B1 - Análise paramétrica de opções e modelos do
Código RELAP4/MOD5
