Contents

	<i>Page</i>
Foreword	vii
Overview	xiii
1. Lasers	1
(Doctor N. U. Wetter and Doctor W. de Rossi)	
1.1 Laser overview	1
1.2 High-power CO ₂ lasers	7
1.3 The neodymium laser	9
1.4 Laser beam propagation	15
1.5 Laser systems and accessories	19
2. Overview of industrial laser applications	29
(Doctor W. de Rossi)	
3. Laser cutting	35
(Doctor N. U. Wetter)	
3.1 The cutting process	35
3.2 Material absorption mechanism	39
3.3 Heat affected zone	42
3.4 Oxygen-assisted cutting	42
4. Laser welding	45
(Professor W. Steen)	
4.1 Operating characteristics	51
4.2 Process variations	67
4.3 Costed example	69
5. Laser drilling	71
(Doctor W. de Rossi)	
6. Marking and scribing	79
(Doctor W. de Rossi)	
7. The laser market	83
(Professor F. Grassi)	
7.1 General laser market share	83
7.2 High-power laser-machining market	84
7.3 Examples and general aspects of the management of laser technology	87

Tables

1. A comparison of different cutting systems	35
2. Behaviour of different materials to laser cutting	42
3. Relative power densities of different welding processes	45

	<i>Page</i>
4. Relative joining efficiencies of different welding processes	46
5. Main characteristics of laser welding	47
6. Comparison of welding processes	47
7. Operational diagram for the welding of zinc coated mild steel with a gap .	62
8. Crack sensitivity rating of certain metals	65
9. Laser welding characteristics for different alloy systems.....	66
10. Laser weldability of dissimilar metal combinations.....	66
11. Relative capital cost of a laser facility	69
12. Comparison of the welding costs for a metre of weld by manual metal arc and laser	69

Figures

1. CO ₂ vibrational energy levels and modes	3
2. Gain-guided stripe semiconductor laser	7
3. A folded waveguide laser cavity.....	8
4. The cross-section of a fast transverse CO ₂ laser	9
5. Top view of a slab laser	9
6. Typical solid-state laser system	10
7. Some configurations of pumping cavities.....	12
8. Radial intensity distribution for the lowest order modes.....	16
9. Linear superposition of two modes in a CO ₂ laser	16
10. Contraction of the TEM ₀₀ and TEM ₁₀ modes	17
11. Comparing different modes with same focal spot size.....	18
12. The focusing behaviour of conventional and enhanced laser beams	18
13. 2D fixed optics machine	21
14. 3D hybrid optics machine	21
15. 3D flying optics machine	21
16. General industrial applications of lasers	30
17. Laser processing head and cutting mechanism	37
18. Relative position of melt front with laser beam and kerf	38
19. Cross-sectional diagram of workpiece during the cutting process.....	38
20. Schematic diagram of a linearly-polarized laser beam hitting the workpiece	39
21. Angle of incidence during laser cutting	40
22. Absorption of iron at YAG and CO ₂ laser wavelengths.....	41
23. Absorption of linearly-polarized light, p, as a function of the cutting direction C	41
24. Increased coarseness of striations with oxygen-assisted cutting	43
25. Micrograph of the transverse section through a laser weld	46
26. Industrial applications of Nd:YAG lasers in 1986.....	47
27. Industrial applications of CO ₂ lasers in 1986	48
28. General arrangement for laser welding	48
29. Arrangement for welding pipe from the inside using metal optics.....	49
30. Conduction-limited and keyhole-type welds	49
31. Shape and flow pattern in laser welds.....	50
32. Flow in a keyhole weld mapped by tungsten pellet	51
33. Blocking effect of the plasma if there is no side jet removing it	51
34. The main process parameters.....	52
35. Welding speed vs power for Ti-6Al-4V	53
36. Welding speed vs power for Laser Ecosse model CL5 laser.....	53
37. Welding speed vs penetration for a fast axial flow CO ₂ laser	54

	<i>Page</i>
38. Joining efficiencies comparing various lasers	55
39. Influence of beam polarization on welding performance.....	55
40. Range of weld shapes usually varying with speed	56
41. Map of weld bead profiles	56
42. Beam diameter vs distance from the focus	58
43. Theoretical variation in the optimal position of the focus within the workpiece for maximum penetration for a given power	58
44. Effect of focal position on weld penetration for 1018 steel	58
45. Various welding joint arrangements	59
46. Welding zinc coated steel with a gap between the sheets for exhausting the zinc vapour.....	61
47. Operational diagram for the welding of zinc coated mild steel with a gap	61
48. Variation in penetration with shroud gas composition and laser power .	62
49. Penetration vs speed for helium and argon shroud gases	63
50. Weld depth as a function of partial pressure of oxygen, related to reflectivity	63
51. The design of a plasma disruption jet with trailing shroud	64
52. The effect of a plasma control jet for a 6 kW laser welding 18.8 stainless steel.....	64
53. Relationship between penetration and pressure for electron beams and lasers	65
54. The coupling of an arc and a laser beam results in (a) the reduced resistance of the arc or (b) the stabilization of the arc for high-speed welding	67
55. Comparison of experiment with theory for various theoretical arc radii during arc-augmented laser welding	68
56. Comparison of operating range for different welding processes	69
57. Typical cross-section of a laser-drilled hole.....	73
58. Typical beam-steered laser marking system	81
59. Near-field imaging system.....	82
